

Element Parameterization problem.

Posted by danberado - 2008/04/21 03:01

Hello, I'm having a problem with the Element Parameterization tool. (I just sent an emailed version of this message to the tech support email address listed in the AGWA 1.5 manual, before noticing the forum here).

As soon as I open the tool, an error message pops up which says:

FormParameterizerElements.New() Unspecified error.

I can click okay and continue, but once I select a discretization file and hit "process", another error pops up:

FormParameterizerElements.btnProcess_Click()
Object reference not set to an instance of an object.

(I've gotten a similiar "object reference" error during the descritization step as well).

The problem isn't only occuring for my data, I can't get the parameterization step to work in the AGWA tutorial either.

I'm running AGWA 2.0 in ArcMap 9.1 (Arcview license type).

Is there some simple solution I'm missing?

Thanks in advance for your assistance.

~Daniel S.

Hold on: I'm stupid. I hadn't downloaded any of the required datafiles.
